

TECHNOLOGY

UAE Technology Sector - Market size, opportunities and Outlook 2023

The GCC region is witnessing increased expansion in the technology sector which is expected to reshape many allied industries, thereby driving companies to strategize themselves in the context of the overall industry ecosystem. Dubai is ranked 12th in the world for global digital competitiveness, and 42nd globally in the IMD Smart City Index.

The UAE has consistently ranked high in the ease of doing business index. Largely spurred by innovation and the high investments in infrastructure, the Government has organically built its sectors on strong foundations that have seamlessly incorporated technology. With recent M&A such as Amazon-souq.com and Uber-Careem, the country is only expected to see more such moves that 'think global and act local'.

Within the last five years, the technology marketplace in the GCC, and the UAE in particular, has grown and evolved from a highly fragmented market of resellers, consulting and systems integration service firms, to an ecosystem of product, service and solution providers offering artificial intelligence, data analytics and smart solutions, to name a few.

Dubai is one of the leaders in crafting smart city plans by using technology to perform daily activities and enhance the lives of its citizens. Right from improving security and remotely monitoring infrastructure, such as power grids, to designing entire cities

based on 3D simulations that predict the future; to making everything from transport to health and education not only more efficient but also sustainable and reduce the likelihood of unexpected problems; Dubai has been at the epicenter of technology in the region. Simply, it is the way of the future.

The Government of Dubai has prioritized Digital and AI and is expected to become global AI capital by 2030. The emirate has also officially declared it will become one of the smartest cities in the world by 2020.

Our approach at TCG is to primarily assess the strengths of the product and service portfolio that our clients wish to procure, or collaborate with; and then provide the suitable plan for the clients to achieve the intended goal.
